

START SMALL DREAM BIG

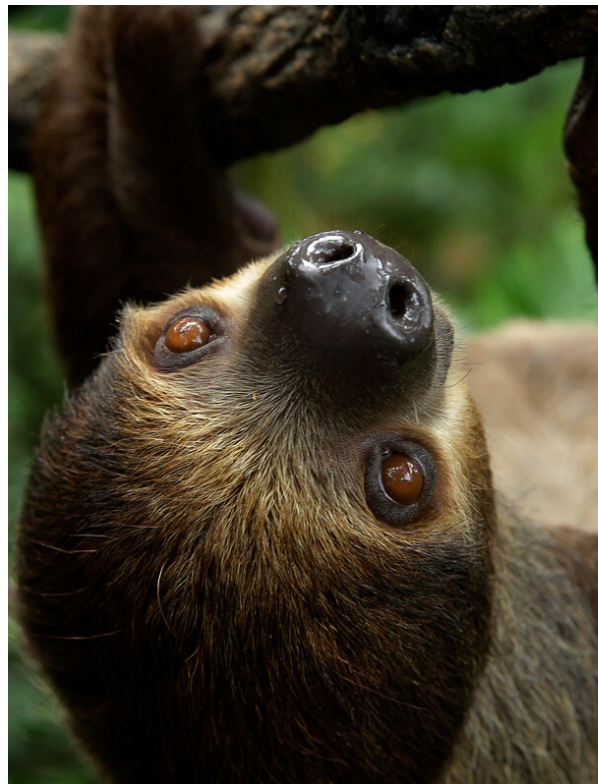

A collaboration with Wildlife Reserves Singapore

FRIENDS OF RAINFORESTS

Rainforests are homes to a wide variety of animals like the gibbon, orangutan, pangolin and pygmy hippopotamus. However, they are being cleared to make space for plantations, farms and other developments. As a result, many animals lose their homes and source of food.

How can your students help?

- Learn more about rainforest animals and their homes.
- Visit Singapore Zoo to meet rainforest animals. Stop by Fragile Forest, which tells the story of how rainforest animals live together, in different levels.
- Share their knowledge of rainforest animals with others in creative ways.
- Use wildlife-friendly products, reuse, reduce and recycle. Encourage their families and friends to do the same.

REDUCE PLASTIC WASTE, SAVE THE WATERY CREATURES

Every minute, an equivalent of one truck full of plastic waste is dumped into our oceans. Each year, about 1 million animals die because of plastic waste. Sea turtles accidentally swallow plastic pieces which block their digestive systems, otters get strangled by plastic bags, sea birds often pick up plastic pieces together with the fish they consume...the list goes on.

How can your students help?

- Learn how animals are affected by plastic waste.
- Use refillable water bottles to reduce the use of disposable plastic products.
- Share their knowledge with others in creative ways!
- We will be most happy to facilitate opportunities for your students to learn and share their knowledge with guests at our Parks or the disadvantaged in the community.
